Yingru (Richard) Li

szrlee@gmail.com • +65 8747 5669 • richardli.xyz • Google Scholar • GitHub • LinkedIn

I make reinforcement learning on frontier models stable, efficient, and scalable.

Impact

- **Core contributor to RL fundamentals at xAI** for the Grok RL big runs, including one of the longest stable RL runs to date.
- **Diagnosed LLM-RL training collapse** (Sep 2025) as an off-policy bias from the training–inference mismatch; the fix—**masked importance sampling (MIS)**, made principled as **Trust Region Masking (TRM)**—is adopted, shipped, or discussed by DeepSeek-V3.2, veRL, Qwen, vLLM, SGLang, Slime, Miles, and Cognition (SWE-grep); widely discussed on X (thread; an 84K-view quote-post).
- **Authored the Rollout Correction framework** in veRL (20k+ GitHub stars), which corrects the gap between the rollout policy and the training policy (training–inference mismatch, stale asynchronous rollouts, replayed data) and is the base on which veRL's newer off-policy algorithms (e.g., score centering and IcePop) are built; MIS and TRM ship here as first-class algorithms. Also contributed the Optimal Token Baseline, a variance-reducing token-level baseline.

Experience

xAI (now SpaceX Super Intelligence) — Singapore
Member of Technical Staff — Dec 2025 – Present

- Core contributor to RL fundamentals for large-scale ("big-run") reinforcement learning of the Grok models.
  - *RL fundamentals* — stability, efficiency, core algorithms, recipes, optimizer and scaling laws; helped identify and resolve critical training instabilities affecting every stage of the RL pipeline.
  - *Long horizon* — training recipes for long-horizon agentic RL.
  - *On-policy distillation* — training recipes and supporting infrastructure.
  - *Infrastructure* — built and scaled these recipes in large-scale distributed RL systems.

ByteDance — Singapore
LLM Algorithm Research Scientist — 2025 – Dec 2025

- Led RL training stability and efficiency for LLM reasoning and agents.
  - Traced RL training collapse to implicit off-policyness from the training–inference mismatch; developed Trust Region Masking (ICML'26), Optimal Token Baseline (ICML'26), Dynamic Vocabulary Pruning, and a simple LR-scheduling fix.
  - Core contributor to veRL: authored the Rollout Correction framework and contributed the Optimal Token Baseline estimator.
  - Co-led end-to-end RL for multi-turn tool-integrated reasoning (SimpleTIR, ICLR'26) and a Triton kernel-generation agent (Dr. Kernel, ICML'26).

Tencent AI & Robotics X — Shenzhen, China
Student Research Staff Member, Agent Center — 2019 – 2022

- Led work on scalable exploration in deep RL—HyperAgent (ICML'24), HyperDQN (ICLR'22)—and stable off-policy learning—Divergence-Augmented Policy Optimization (NeurIPS'19).

Microsoft Research — Beijing, China
Research Intern, Theory Center — 2016

- Combinatorial optimization and reinforcement / bandit learning algorithms.

Education

The Chinese University of Hong Kong (CUHK) 2018 – 2025
Ph.D. in Computer and Information Engineering. Advisor: Zhi-Quan (Tom) Luo. Committee: Xinyun Chen, Baoxiang Wang, John C.S. Lui, Benjamin Van Roy (Stanford & DeepMind).

Huazhong University of Science and Technology (HUST) 2020
B.E./M.E. in Computer Science. Ranked 1st/134 overall; 1st/26 in Software and Theoretical CS.

Selected Honors

- ICML 2026 Gold Reviewer; reviewer for NeurIPS, ICML, ICLR, AISTATS, and TMLR (40+ papers).
- Best Student Paper, IEEE Sensor Array and Multichannel Signal Processing Workshop (SAM), 2024.
- SRIBD Ph.D. Fellowship (Gold Class), 2023; Presidential Ph.D. Fellowship, CUHK, 2019–2023.
- National Scholarship (China), top 0.2% nationwide, 2018; Qiming Star Award (1 of 5 from 7,112 undergraduates), HUST, 2016.
- First Prize, China National Mathematics Olympiad (Province-level Math League), 2012.

Selected Talks

- *LLM-RL Instability and the Training–Inference Mismatch* — SLAI and the Bay Area RL community (2025); *Revisiting Trust Region Policy Optimization in the Era of LLMs* — QingkeAI (2025).
- *Exploration at Scale: Theory, Algorithms & Applications* — MIT, Princeton, INFORMS Annual Meeting, ISMP, RLChina (2024); *Tackling Data Scarcity for Trustworthy Agents* — ETH Zurich (2024).
